Youvah

PROJECTS

LifeLog | 2025
Built for Nextjs Hackathon

- Came up with this idea for the hackathon, basically a notion on steroids, where you can Journaling, manage finances and create long term goals all in a single application.
- My major contributions were towards creating Auth, creating long terms goals, integrating Ai Features, and to primarily manage the backend.
- We didn't won, but the project was loved by the team, One of the judges messaged one of us.
- The website can be viewed at https://nextjs-hackathon-murex.vercel.app/

ResistRx | 2025
Fighting Antibiotic Resistence

- A student-led initiative focused on spreading awareness about the growing global threat of antibiotic resistance.
- This is a WIP, and is a initiative by my classmates, and they're looking for a web developer. So I thought, why not make it free of cost since its a NGO.

COMMUNITY

I'm active In Next.js Discord Server, where I help 100s of other developers with their technical questions In Next.js, and I'm currently top 15 in "most helpful" list at the website. I also maintain the Next.js Forum Bot & Website - https://nextjs-forum.com/ with new features and bug fixes.
